

Intruder Alarm Detector

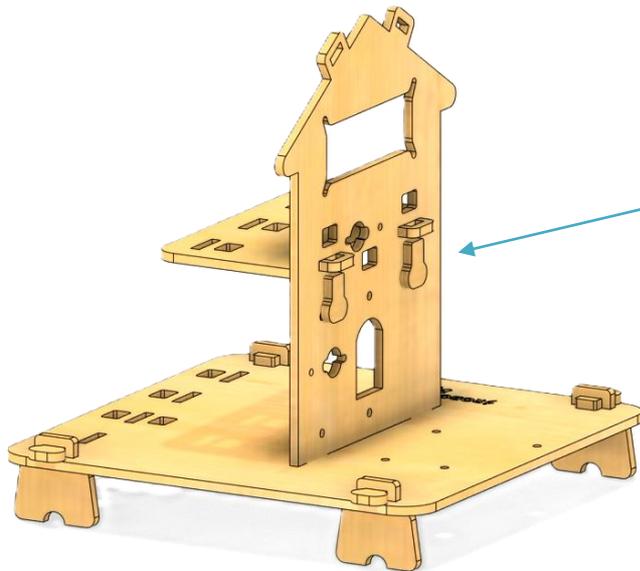

Step 1: Installation of Base

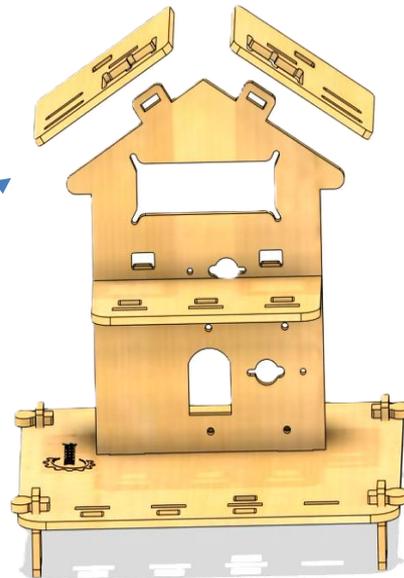

Step 2: Installation of Home Board

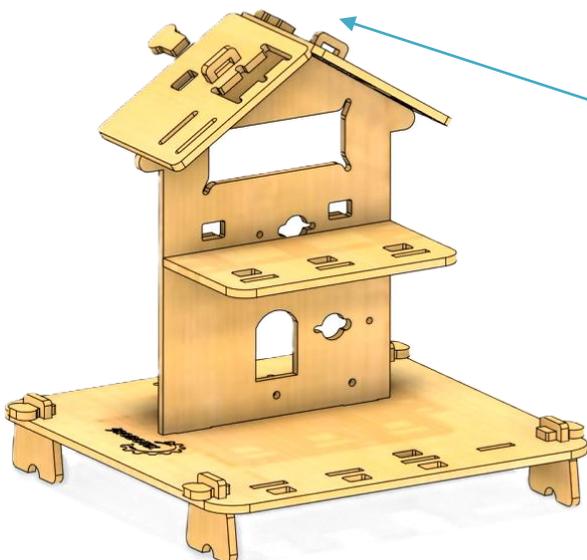

Installation of Home Board

Inserting Plug

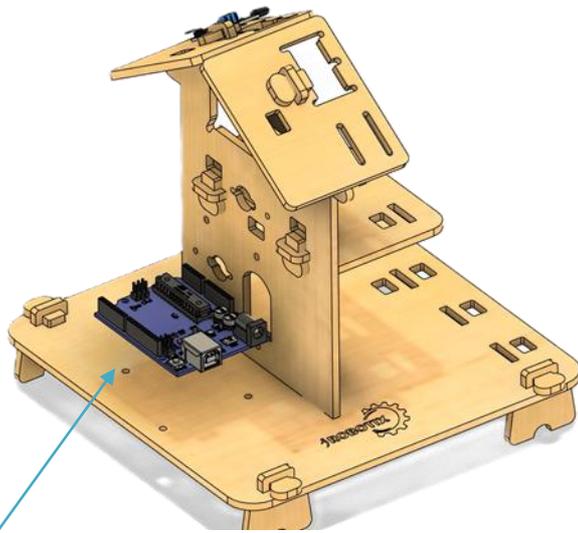

Inserting Top roof

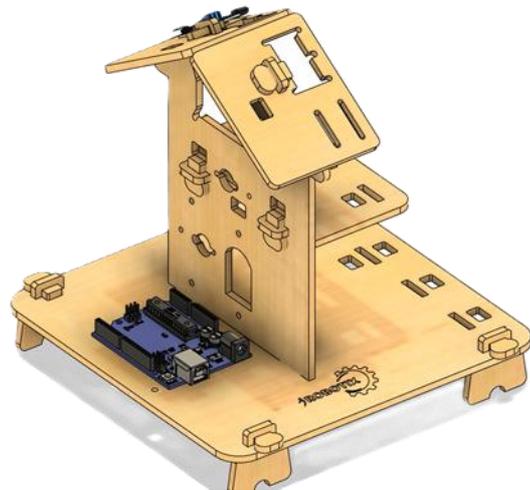

Inserting Plug

Step 3: Placing the Arduino Board

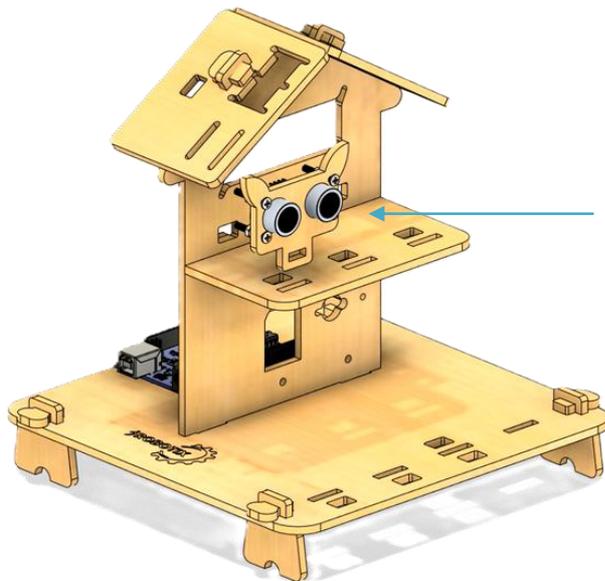

Arduino Board

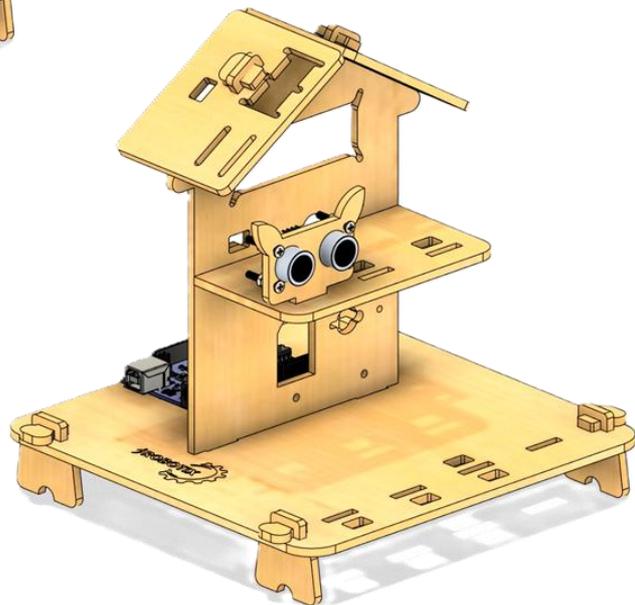

Note: First, place the Arduino Uno board on the designated base platform inside the structure, aligning its mounting holes with the pre-cut slots or standoffs. Secure the board using screws, spacers, or zip ties to prevent movement and avoid direct contact with the wooden surface.

Step 4: Placing Ultrasonic Sensor

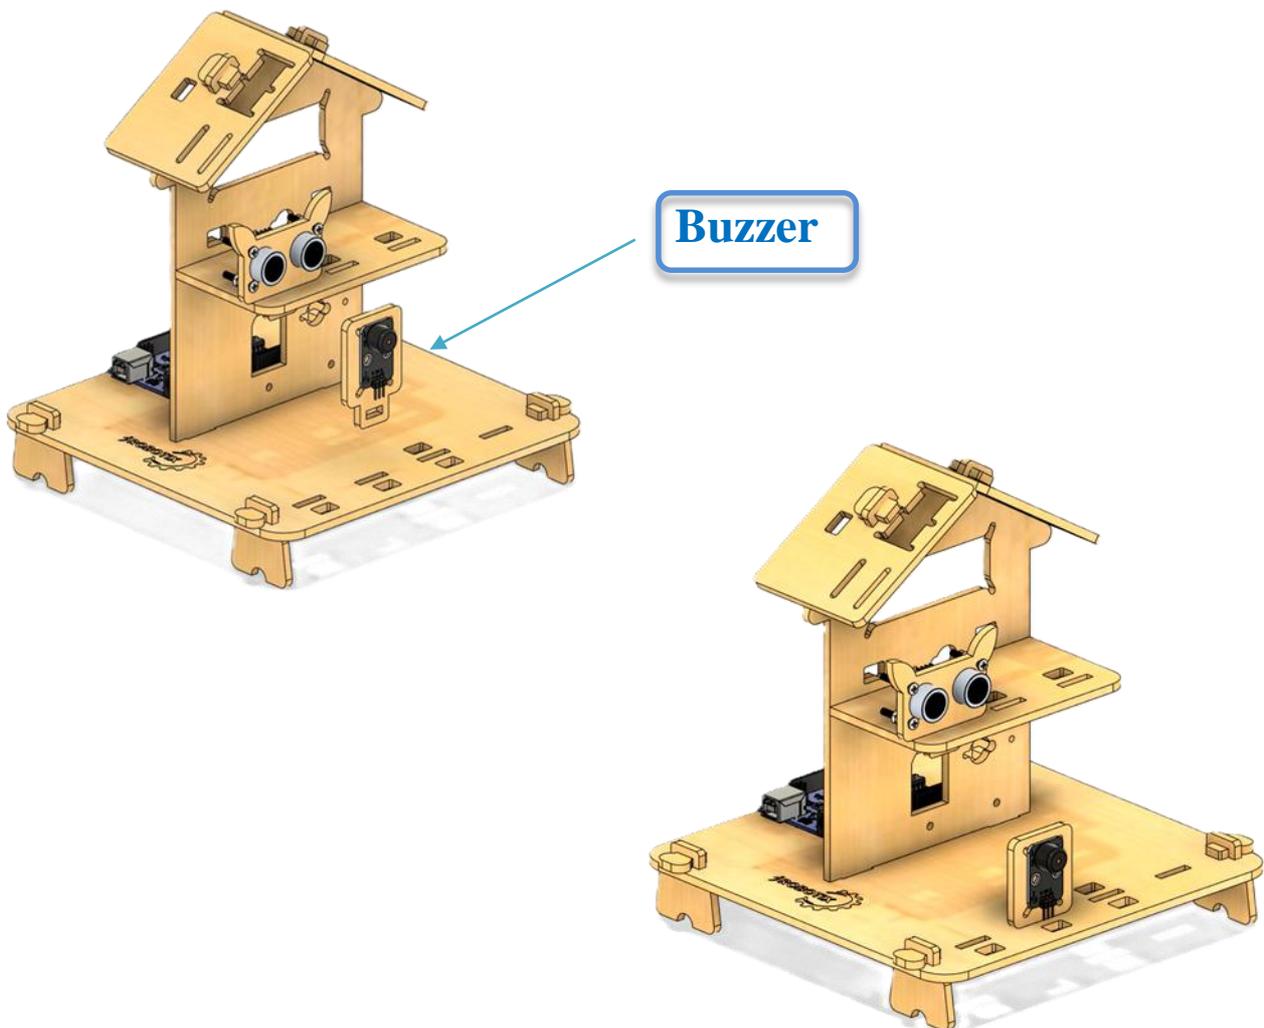

Ultrasonic Sensor

Note: The ultrasonic sensor is installed by mounting it securely on the project base with its two circular sensors facing the object to be detected.

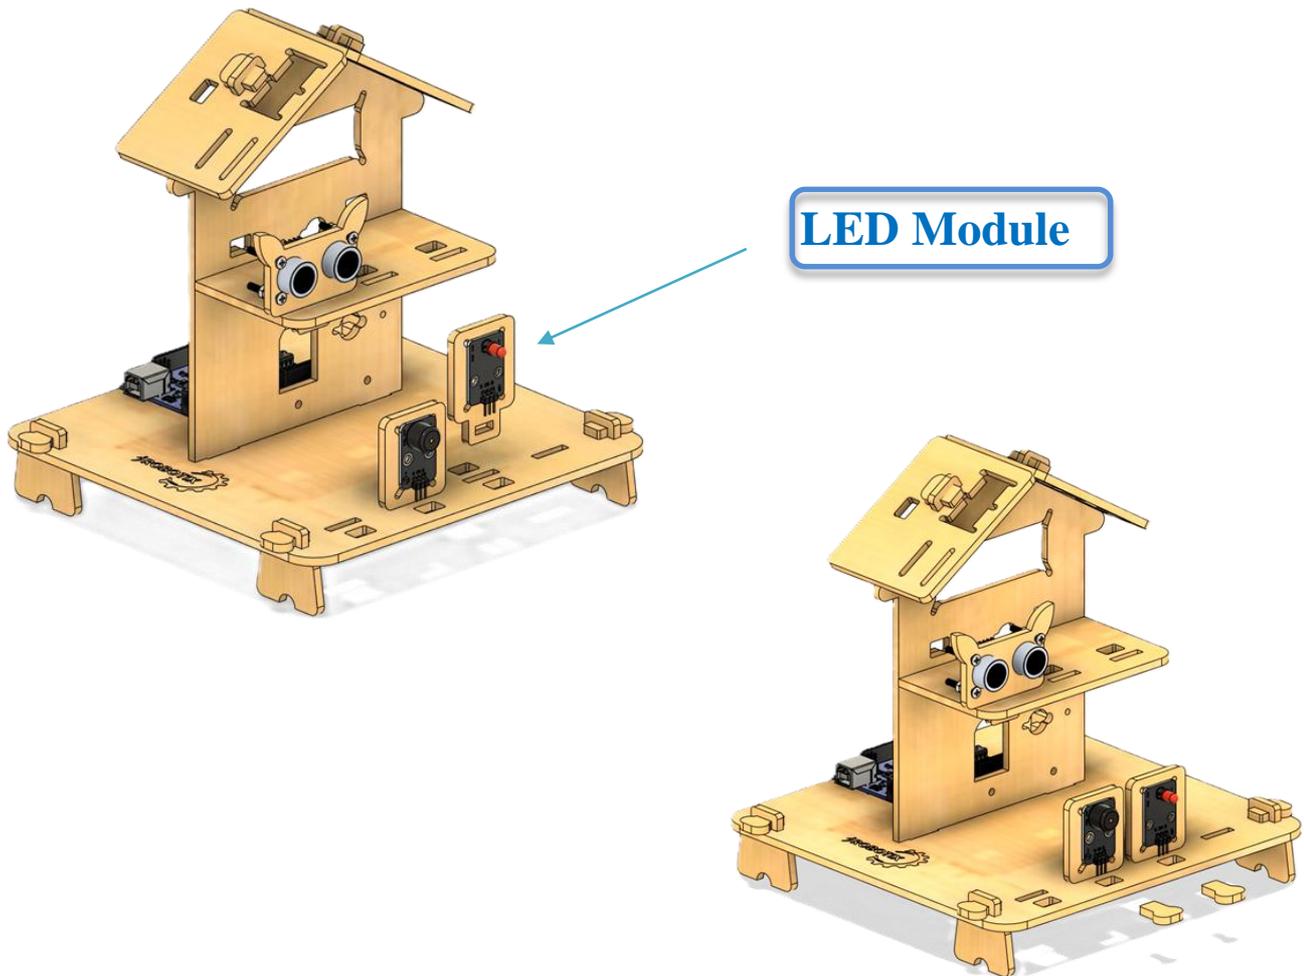

Step 4: Placing the Buzzer

Note: The buzzer is installed by first locating its mounting position on the front side of the base plate near the house structure, as shown in the image.

Step 6: Placing the LED Module

Note: First, place the LED module into the designated slot or mounting hole on the wooden panel so that the LED faces outward and is clearly visible.
